Cheetah Enclosures

Tom Cooper, Construction COTR for the Conservation Research Center, Smithsonian National Zoo, said, "When we needed eight enclosures to house cheetahs at our research center, we chose Easi-Set buildings. The **flexibility of the all concrete building** allowed us to specify small openings for the cheetahs to enter and exit the building while accommodating large doors for our staff to feed the animals and clean the interior. The concrete floors **resist any damage** from the cheetah's claws and allow for easy cleaning. The concrete walls were manufactured with a custom clap board exterior finish to **blend with existing buildings.**"
